

EDUGENIE – GOOGLE GEMINI POWERED LEARNING ASSISTANT

PHASE 7: Project Documentation Phase

1. Introduction

Documentation records the complete EduGenie project in a structured and understandable form. It provides evidence of the work completed and helps evaluators understand the project's purpose, process, and result.

2. Project Introduction

The documentation introduces EduGenie as a Google Gemini powered learning assistant designed to support students with educational questions and explanations.

3. Problem Statement and Objectives

The report explains the learning problem identified during brainstorming and lists the objectives of creating a simple AI-powered educational assistant.

4. Requirement Documentation

Functional and non-functional requirements are recorded along with hardware, software, internet, and AI-related requirements.

5. Design Documentation

The system workflow, user interaction, interface structure, input-output process, and Gemini integration concept are described. Diagrams can be added to make the design easier to understand.

PHASE 7: Project Documentation Phase – CONTINUED

6. Development Documentation

The development process explains how the interface and AI-powered workflow were implemented. Screenshots can be included to show important parts of the project.

7. Testing Documentation

Testing methods, sample questions, expected results, observed results, identified problems, and corrections can be recorded in a test table.

8. Results and Benefits

The report describes the completed prototype and its usefulness as a learning-support tool. It should clearly distinguish demonstrated features from possible future features.

9. Future Enhancements

Possible future improvements include personalized learning, subject-wise assistance, multilingual support, progress tracking, study material generation, improved response controls, and additional educational tools.

10. Conclusion

Proper documentation brings together every stage of the project. It creates a permanent record of the EduGenie idea, requirements, design, development, testing, results, and future scope.
